The NIR-MX-LN series are an intensity modulator especially designed for operation in the 1000 nm wavelength band.

This Mach-Zehnder modulator offers engineers working in the 1000 nm the intrinsic and unparalleled benefits of LiNbO₃ external modulation : high bandwidth, high contrast up to 30 dB and beyond, low insertion loss, high polarization extinction ratio, ease of use.

Like all ixblue Near InfraRed (NIR) modulators, the NIR-MX series use a proton exchanged based waveguide process that confers them an unparalleled stability even when operating at high optical power up to 25 dBm. The NIR-MX amplitude modulators come with high PER and Low IL options.

Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect device reliability.
